DETAILED ACTION

Election/Restrictions

1. Applicant's election of species "a" in the response received 15 April 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 6-12 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the response filed 15 April 2004.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the combination of a saddle-shaped support member and a disc-shaped support member (claim 4) and the combination of a saddle-shaped support member and an A-shaped support member (claim 5) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Art Unit: 3711

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35

U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. The following is a quotation of the second paragraph of 35

U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 4 and 5 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Art Unit: 3711

Regarding claim 4, the specification does not contemplate an embodiment wherein a tennis racket hand positioning device includes the combination of a saddle-shaped support member and a disc-shaped support member

Regarding claim 5, the specification does not contemplate an embodiment wherein a tennis racket hand positioning device includes the combination of a saddle-shaped support member and an A-shaped support member.

7. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim depends from itself; for other examination purposes, it is assumed that the claim depends from claim 1.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 3711

9. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Number 6,305,051 (Cho) in view of U.S. Patent Number 4,402,508 (Pflueger).

Regarding claim 1, Figures 4 and 24 of Cho show a thumb support member designed for attachment to a racquet handle bevel at the handle mid-section. Also, see column 16, lines 24-47. The contour of the Cho support member is considered to be saddle-shaped. It would have been obvious to one of ordinary skill in the art to place an attaching strip on the reverse surface of the support member and secure it to the racquet handle with a grip wrap in view of Pflueger who shows in Figures 3 and 10 that it is old and well-known in the handle art to do so in order to securely attach a finger support member to a handle.

Regarding claim 2, it would have been an obvious matter of design choice to make the Cho support member as modified above adjustable, since it has generally been recognized that making elements adjustable to better suit different users involves only routine skill in the art.

Regarding claim 3, the problem of grip slippage is generally well-known in the handle art and particularly in the sports handle art of Cho. See column 2, lines 51-53. It was commonly known to those skilled in the art that rubber material

Art Unit: 3711

would reduce such slippage. Therefore, it would have been obvious at the time the invention was made for a person having ordinary skill in the art to provide a rubberized coating to the Cho support member as modified above for the purpose recognized in the Cho art as discussed above.
